

# GSY-TOXPRO

## The Ultimate Toxin Prevention Program

### **COMPOSITION** Each Kg contains:

Hydrated Sodium Calcium Alumino Silicate (HSCAS) Containing Alumina, Phosphorous pentoxide, Bariumoxide, Potassium oxide calcium oxide, Silicaoxide, Carbon, Sodium oxide, Ferric oxide, Strontiumoxide, Hydrogen, Sulfurtri oxide, Magnesium oxide, Titania, Managanese oxide, Chlorine, and Nitrogen. Buffered organic acids mix (containing), Citric Acid, Form Acid(Calcium Formate), Mannan oligo saccharide (MOS), Activated Charcoal, Oxine Copper. Lipotropic agents mix (containing) Betaine, Inositol, other proprietary micro ingredients and patented mix.

### **DOSAGE**

The product should be mixed with feed or raw materials uniformly.

#### **Prevention of diarrhea and mycotoxins dosage:**

Add this product 50-125 g to 50kg of complete feed.

#### **Recommended dosage for the treatment of diarrhea and the feed with mildew obviously:**

Add this product 150-250g to 50kg of complete feed.

**PACKING:** 25kg/bag

# GSY-TOXPRO

**GSY- TOXPRO contains all the essential components for the  
“ Ultimate Toxin Prevention Program”**

**GSY - TOXPRO** not only inhibits mold and helps bind toxins, it also enhances functions of the liver, neutralizes pesticide residues, flushes out Salmonella, and improves performance and immunity. The unique balanced formula contains Hydrated Sodium Calcium Alumino silicate, a very potent sorbent that reduces the toxicity of aflatoxins (AF) or T-2 toxin. HSCAS improves performance of the chicks and animals by reducing the toxic effects and increasing body weight again by 40%-50% through increasing efficiency of feed utilization. It also contains a balanced formula of organic acids that work synergistically in improving the digestive process with its effect as an antibacterial and by reducing the pH of the entire digestive tract, thus promoting better utilization of the feed and inhibits the growth of E.coli and Salmonella and other pathogens. Mannan-oligosaccharide, MOS is shown to improve gastro intestinal health, as well as over all health, thus improving well-being, energy levels, and performance of the birds and animals. MOS, through the binding to mannose, reduce the risk of pathogen colonization in the intestinal tract and helps improve feed conversion converting feed more efficiently into body tissue and increase body weight.

**GSY-TOXPRO** contains activated charcoal, which is very potent ingredient with its small particles and its highly porous surface works by binding toxins to prevent stomach and intestinal absorption. Activated charcoal also interrupts the entero hepatic and entero enteric circulation of some drugs and toxins and their metabolites. It contains two of the most important lipo tropic agents. Betaine, which is powerful lipo-tropic agents that increase gastric acid and promotes the export of fat from the liver. Betaine is necessary for the maintenance of a healthy liver and essential for fat metabolism by burning the exported fat for additional energy. Inositol is a potent lipo-tropic agent that plays a critical role in defending against toxic compounds as assists in the detoxification reactions in the liver. It also contain soxine-copper, which is recognized as a very potent antifungal agent.

**GSY-TOX PRO** helps prevent a flatoxicosis, prevents caking of feed, reduce PH of gut and feed, aiding in mold inhibition, helps prevent pathogen population, helps prevent multiple mycotoxicosis (T<sub>2</sub>, Citrinin, Zeorelenone etc.), aids in preventing Ochratoxicosis, helps prevent fungal contamination, assists in preventing stress on the liver, helps prevent immune stress, and helps alleviate the ill-effects of pesticide residue. Prevents growth of mold and bacteria, exerts irreversible toxin-binding, offers effective and irreversible toxin-binding due to ideal particle size, prevents ill-effects due to pesticide residue, protects liver function and immune states, flushes out harmful pathogens, and improves performance and production.
